Building a Better Detector Dog

Pamela Haney, MS

Lucia Lazarowski, PhD

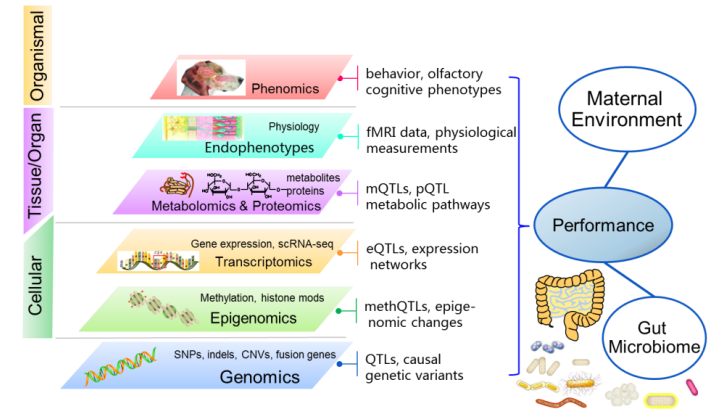

AUBURN UNIVERSITY

COLLEGE OF
VETERINARY MEDICINE

MISSION STATEMENT

To innovate canine detection technology by exploring basic and applied research frontiers in olfaction, behavior, genetics, and physical performance.

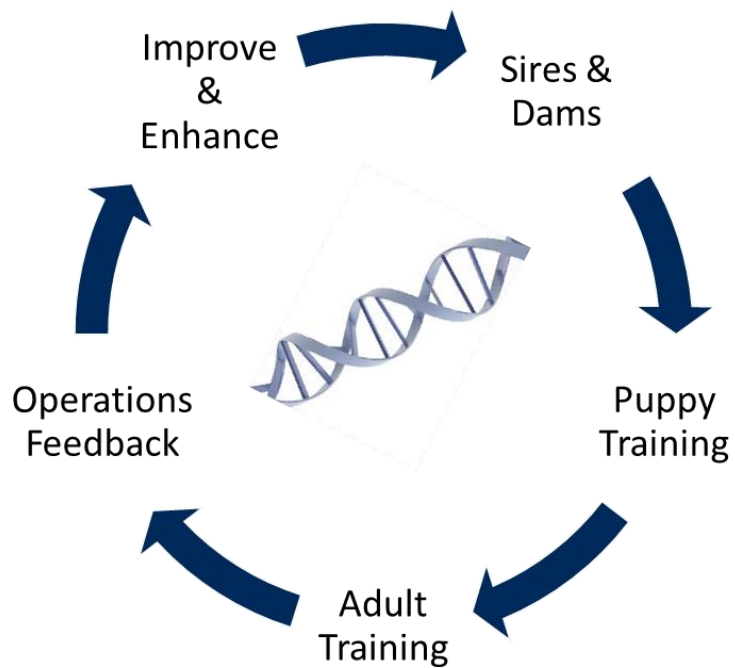

VISION STATEMENT

To enhance the power and lives of our canine partners so they can make the world a safer place.

Enhance Domestic Production of Detector Dogs

Determine the Best Production Model of Detection Dogs

Breeding Program Phases

CPS Breeder Requirements

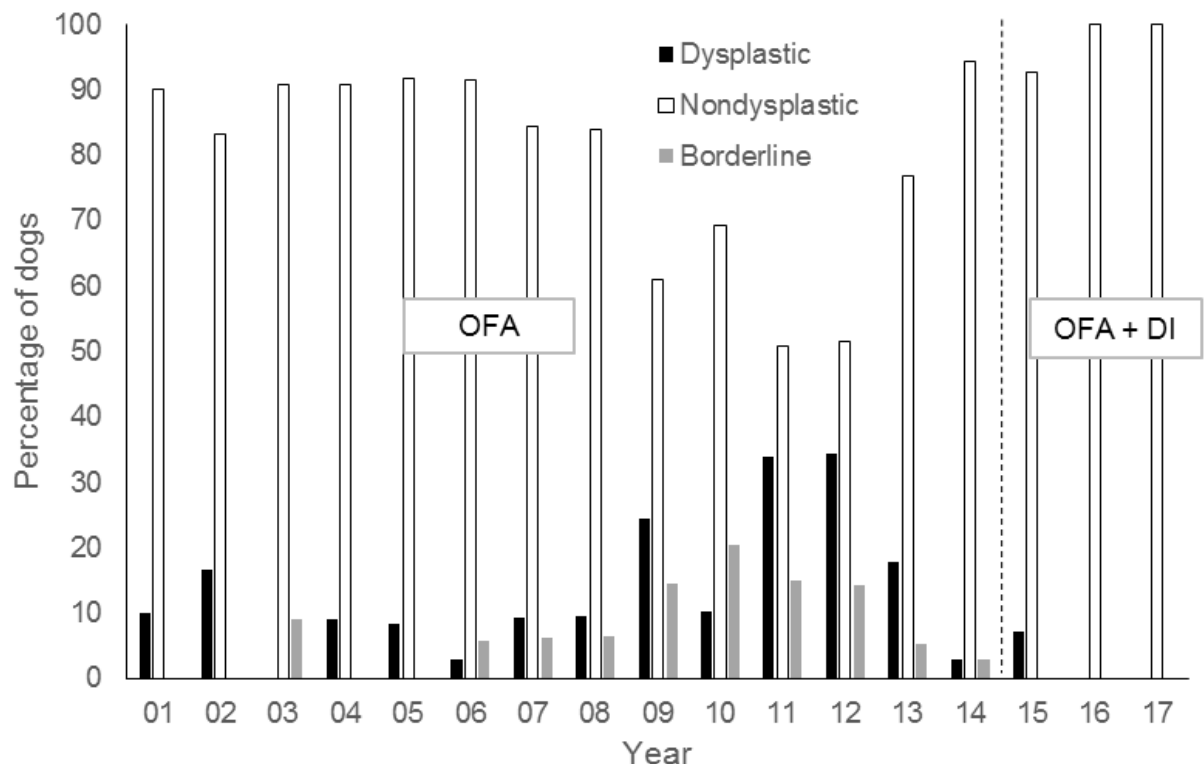

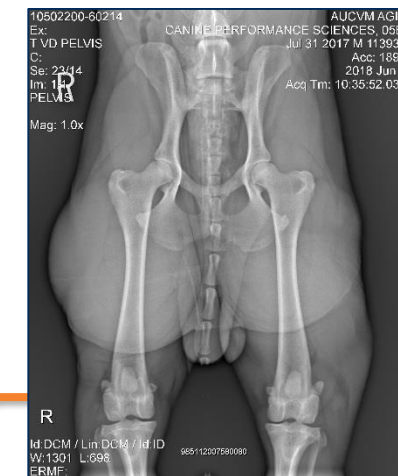

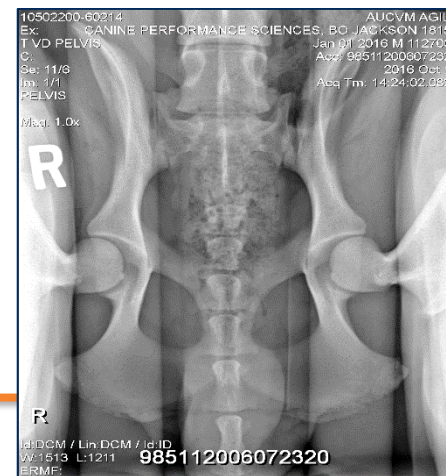

CPS Breeder Medical Requirements

- PennHip - DI at or below 0.30
- OFA - Good/Excellent Hips
- Elbows/Shoulders/Stifles-Normal
- No Transitional Vertebrae
- EIC - Clear
- CNM - Clear
- prcd-PRA – Clear
- Eye CERF - Normal
- Echo-Normal
- Brucellosis - Negative

Breeding Program Advancements Eliminating Hip Dysplasia

Haney, P. S., Lazarowski, L., Wang, X., Wang, X, Hathcock, J., Lofton, R., Wilborn, R., Waggoner, L. P. (in press). **Effectiveness of PennHIP and Orthopedic Foundation for Animals hip quality measurements for breeding selection to reduce hip dysplasia in a population of purpose-bred detection dogs.** *Journal of the American Veterinary Medical Association.*

- **Significantly improved population hip quality by 22% with addition of PennHIP DI as breeder selection tool**
- **Effectively eliminated hip dysplasia from population**
- **No dog with hip dysplasia produced since 2015**

- **OFA** measures will **eliminate worst hips** from population.
- **OFA** is a **good measure** for hip quality of a working population.
- **PennHIP DI** as breeding selection tool can **eliminate hip dysplasia** from a population.
- **PennHIP DI** should be the **gold standard hip quality measure** for entrance into a breeding colony.

Future

CPS population DI

0.38 ± 0.10

Does exercise help reduce hip laxity in growing pups?

Does exercise increase bone density in growing pups?

Do pups with more rear limb proprioception have healthier gaits, which in turn improves overall movement and reduces stress on hip joints?

Multiple factors within a single breeding cycle were examined
from AUCVM-CPS breeding
program between January 2014 – May 2019

Factors Include

- Age of Dam
- Semen Type
- Semen Quality
- Insemination Method
- Site of Semen Deposition
- Number of Inseminations

Multiple regression including
Matings + Semen Type + Natural
Tie + Insemination Location +
Age of Dam + Estrus
Management Drugs
significantly predicted the
number of pups conceived

55 Breeding Cycles with 26 females

$$F_{(7, 47)} = 9.08, p < 0.001, R^2 = 0.5116$$

Breeding Program Advancements

Retrospective Study: Determinates of Litter Size

Mean Litter size	Median Litter size	Range Litter size
5.45 ± 3.87 pups	6 pups	0 – 12 pups

# of inseminations per breeding cycle	
Mean	Range
2.47 ± 0.74	1 - 4

Discovery:

One live cover mating ↑ litter size by 2 pups

One TCI mating ↑ litter size by 3 pups

- Ovulation timing to confirm peak fertile window
- Standardized Breeding Cycle – Spring 2018

Breeding Cycle – Goal: 3 Matings
Live Cover, TCI, Live Cover/VAI

12 Litters born since April 2018

	Mean Litter size
	8.08 ± 2.99 pups
Conception Rate	Median Litter size
100%	9 pups
Semen Type	Range Litter size
Fresh	2 – 12 pups

- In 2014, CPS replaced Free Whelping with Elective C-sections
- Elective C-sections were chosen with hopes of:
 - ↓ duration of whelping
 - ↓ stress for dam and pups
 - ↑ neonatal survivability
 - ↑ controlled whelping process

Neonatal Survivability = Number of viable pups after 24 hours

➤ CPS Breeding Colony Typical Gestation length

-63 days \pm 1 day from LH surge

-61 days \pm 1 day from ovulation

C-section delivery was **significantly faster** (47 ± 11 minutes, $n=17$) when compared to free whelping (237 ± 66 minutes, $n=12$), $p < 0.001$.

Puppy Survivability

Puppy survivability **did not significantly differ**

between free whelp and elective C-section, $p = 0.68$.

Percent Puppy Survivability :
Free Whelp vs Elective C-Section

Type: Free Whelp (FW) vs Elective C-Section (CS)

*Unpublished data

➤ Free Whelp = 27 Litters

(includes 4 litters that resulted in emergency C-section)

➤ Elective C-Section = 28 Litters

HOW TO KNOW WHEN DAM IS READY FOR C-SECTION?

- **Ovulation timing** performed during estrus—more exact projected DOB
- **Progesterone value** of <2 ng/ml on day of C-section
 - Submit blood samples starting 3 days prior to whelping
- **Ultrasound exams** to assess fetal maturation
 - Perform starting 3 days prior to whelping
 - **Fetal Heart rate**
 - > 200 beats per minute
 - **Fetal maturation**
 - Kidneys ~57 days
 - Intestines ~61-62 days
 - » View peristalsis on ultrasound
 - **Maternal behaviors**
 - Nesting (usually seen overnight when dam is alone)
 - Lack of appetite
 - Decline in body temperature of the dam??

Society for Theriogenology: “Find a Vet” feature

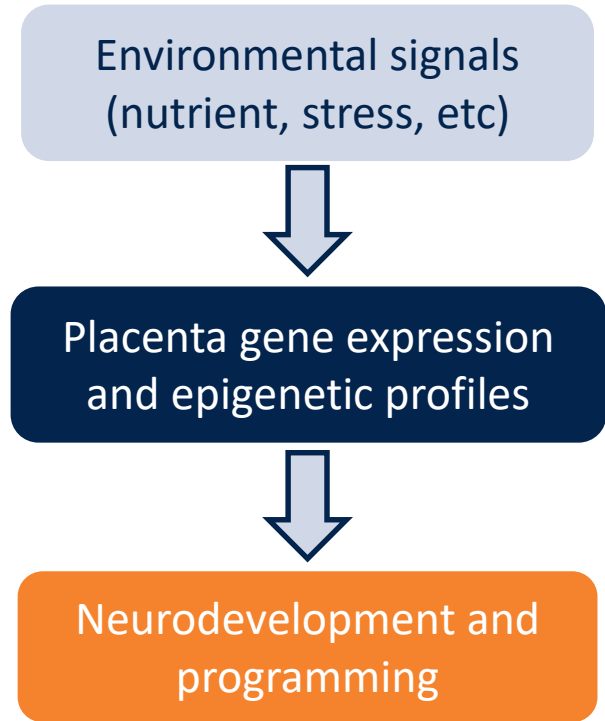

www.therio.org

The screenshot shows the Society for Theriogenology website. The browser address bar displays www.therio.org/search/custom.asp?id=1107. The website header includes the logo and tagline: "Society for Theriogenology - Veterinarians Dedicated to Animal Reproduction". The navigation menu contains: ABOUT US, MEMBERSHIP, EDUCATION & EVENTS, THERIO NEWS, FOR THE PUBLIC, and VETERINARY RESOURCES. A dropdown menu is open under "FOR THE PUBLIC", listing: HISTORY OF THERIOGENOLOGY, REPRODUCTIVE VETERINARIAN (highlighted with an orange arrow), SPEAKERS' BUREAU, USEFUL LINKS, CLINICAL THERIOGENOLOGY JOURNAL, POSITION STATEMENTS, STAFF LIST, and CONTACT US. The main content area is titled "Reproductive Veterinarians - Procedure Search". It includes a search box with the text "Find search criteria..." and a search icon. Below the search box are several dropdown menus for filtering results: Country (Any Country), Location, Species of Interest, Bovine Procedures, Camelid Procedures, Canine Procedures, Equine Procedures, Exotics/Farmed Deer Procedures, and Feline Procedures. On the right side, there is a "SIGN IN" button with a "Remember Me" checkbox, and links for "Forgot your password?" and "Haven't registered yet?". Below the sign-in section are two sections: "Calendar" with dates "7/22/2020 » 7/25/2020" for the "2020 Therio Conference" and "7/21/2021 » 7/24/2021" for the "2021 Therio Conference - Omaha, NE"; and "Therio News" with a date "5/11/2017" for "Veterinary specialty colleges".

Maternal influence on puppy health and behavior

- Placenta is a critical organ for fetal morphological and behavioral development, especially brain development
- Identify signatures in placental transcriptome associated with traits of interest
- Placental immunity/inflammation status affects offspring behavior and the level of stress

CPS dog placental samples collected on August 17, 2018 from a litter of 10

healthy, 102g

deceased 1-day after birth, 52g

Puppy APGAR scores Impact of Elective C-section on pups

Litter DOB: _____

Enhancing Domestic Production of Detector Dogs

Strategic Partners

Future

Conception rate of last 55 Breeding Cycles

80 %

11 not pregnant →
9 used Frozen semen

Why trouble with Frozen?

Solution: Continue to use TCI for inseminations → then immediately Live Cover with a vasectomized male for each mating

Average age of 1st estrus

17.4 months ± 8.69

Average time between estrus

7.47 months ± 1.61

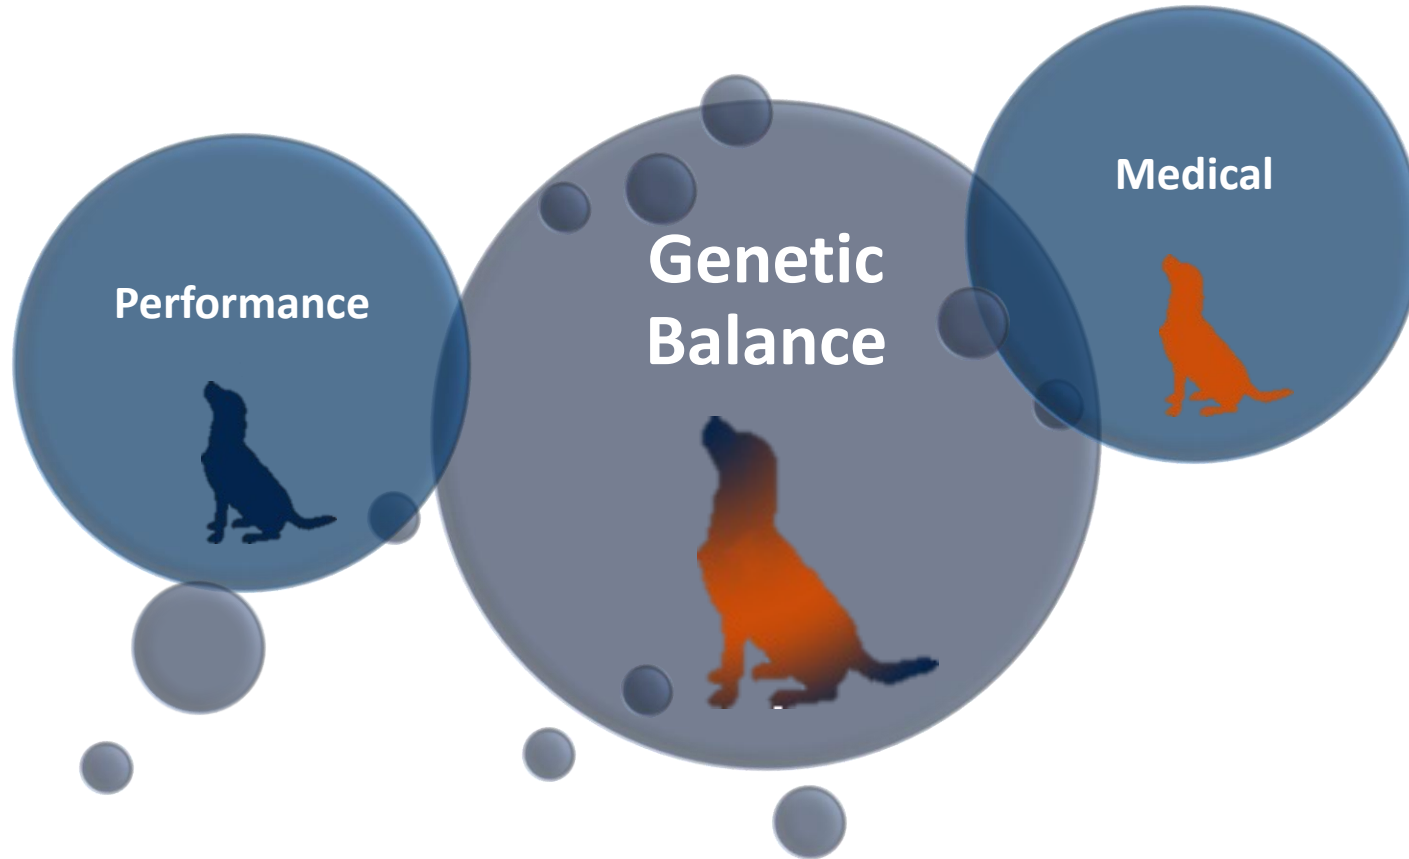

Why so old? Like gymnasts? →

Solution: Examine genetics, pedigree, and various body systems.

CPS Breeder Requirements

- I. Overview of behavioral assessments; what we've done and what we've learned

- II. Current and future directions in assessing, identifying, and breeding for improved behavior

What is the Auburn Dog™ Behavioral Phenotype?

Retrospective analysis of CPS behavior evaluations N=157 between 2014-2016 3, 6, 10, 12 mo

Performance	Retrieve
	Hunt
	Focus
	Possession
	Independence
	Work effort
	Air scenting
Environmental Soundness	Surfaces
	People
	Clutter
	Startles
Trainability	Overall

- Dogs in service
 - VaporWake®
 - Standard EDD

- Dogs unsuitable for service (washouts)

Outcomes 2014-2016

N=157

- VWD
- EDD
- Behavior washout
- Medical washout

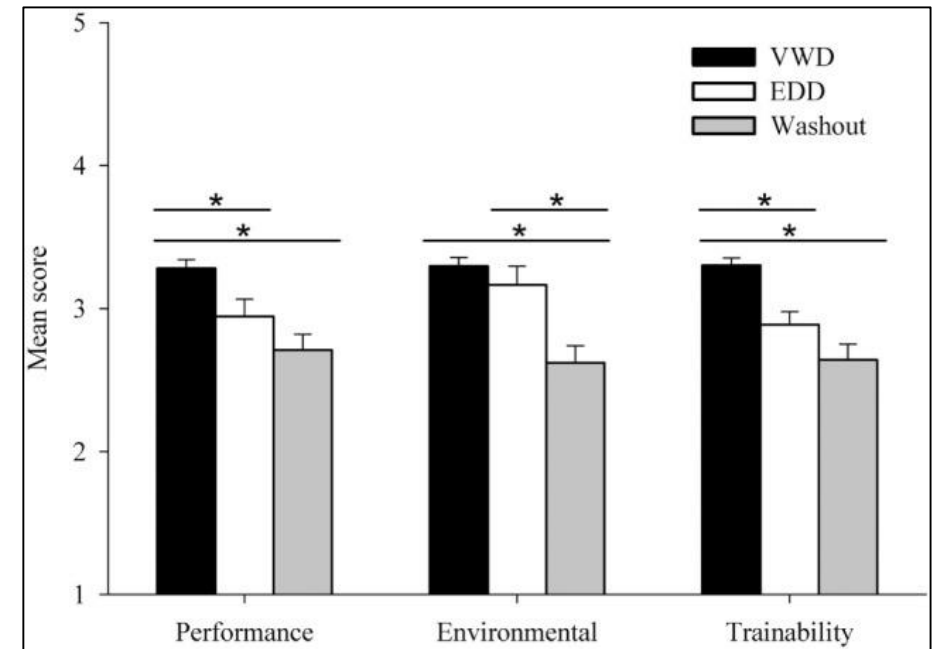

Behavioral issues

- Environmental
- Performance

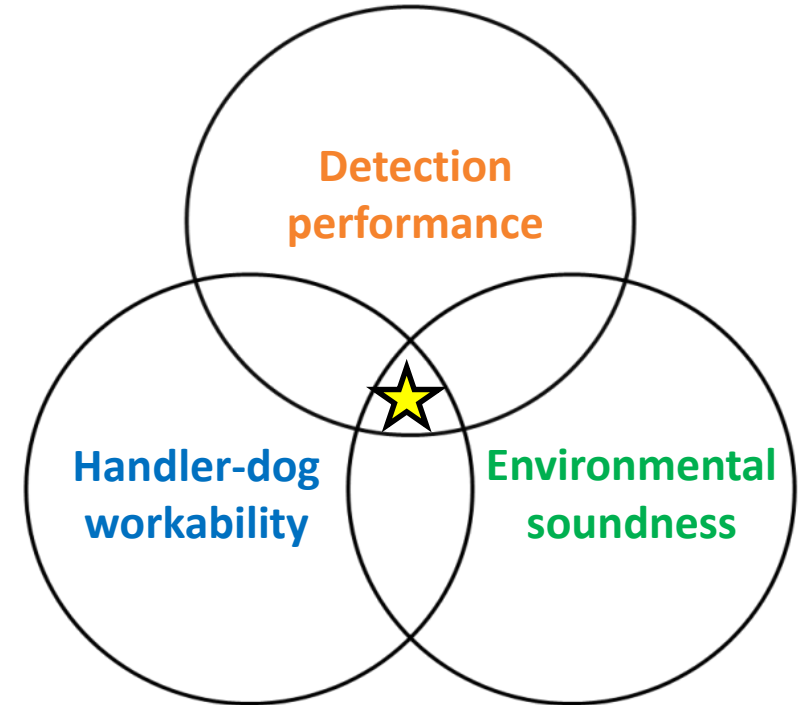

- Distinct behavioral differences between **VaporWake™**, **EDD**, and **Washout** dogs
 - Performance-related traits differentiated VWD from EDDs, not ES
 - **Environmental soundness** greatest factor for serviceability as a working dog
- Service-quality dogs not necessarily reflect breeding quality

Lazarowski et al. (2018)

CPS Breeder Behavioral Requirements

- Excellent hunt and air-scenting
- Deference for searching vs. social interaction with people
 - Balance between independence and trainability
- Focused, persistent, and composed when faced with difficult challenges
- Resilience in extreme work environments

- Refine definitions/measurement to gain better resolution of important traits
- Early prediction
- Improve environmental soundness
- Genetic vs. environmental

Approaches

I. Improve behavioral assessments

II. Emphasis on early development

Incorporation of cognitive assessments

Cognitive testing

N= 81 @ 3, 6, and 11 mo

Cognitive Domain	Sub-domain	Test
Social	Communication	Gesture following
		Help solicitation
	Empathy	Emotion contagion
Physical	Reasoning	Causal cues
	Spatial navigation	Barrier detour
	Object permanence	Spatial transpositions
General	Executive Functions	Working memory
		Self control
		Attention
	Motivation	Persistence
		Emotion regulation

Duke University Dog Cognition Test Battery

Behavior evaluations

Performance	Retrieve
	Hunt
	Focus
	Possession
	Independence
	Work effort
	Air scenting
Environmental Soundness	Surfaces
	People
	Clutter
	Startles
Trainability	Overall

Final outcome:

- Success
- Washout

I. Refinement of Behavior Evaluations: Cognitive assessments

Joint attention

Social bias

Inhibitory control

Problem-solving

Behavioral flexibility

Persistence

Attention/Memory

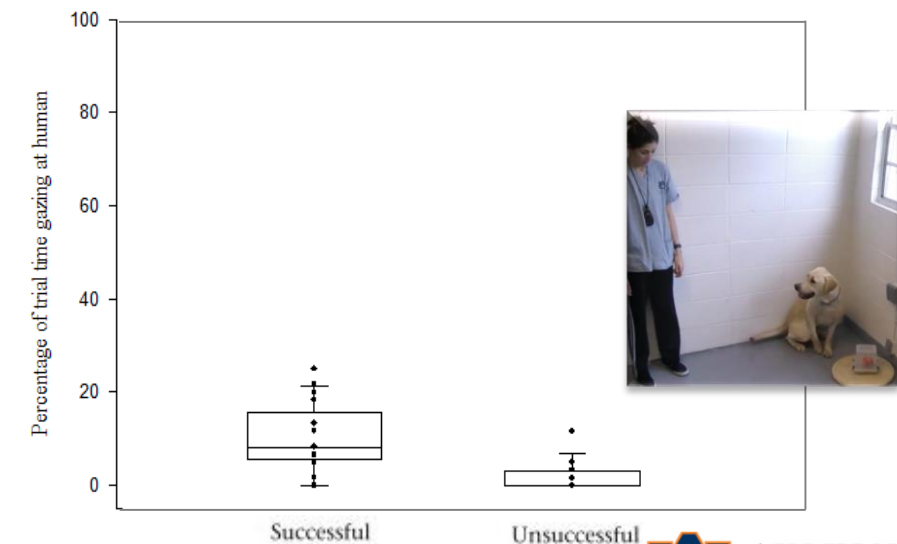

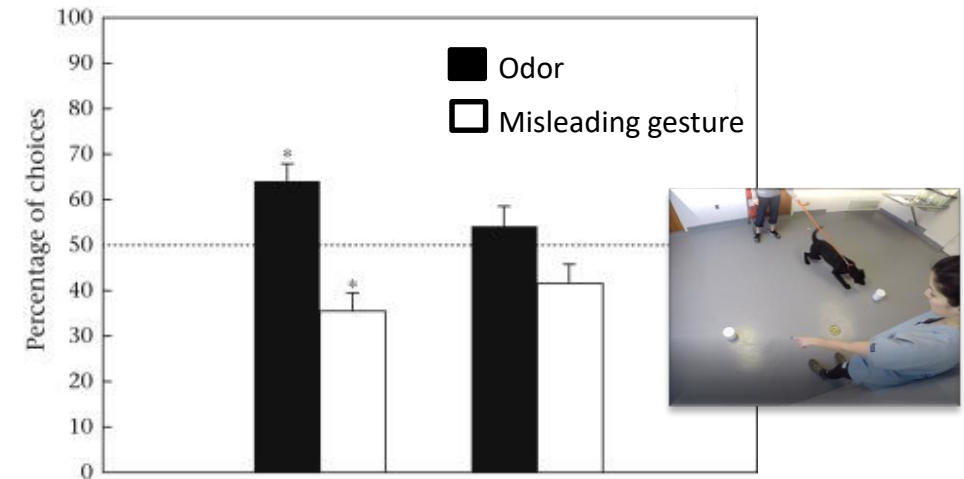

1) Relationships between cognitive abilities, behavioral evaluations, and outcome

- Problem-solving speed
- Accuracy success
- Attention
- Cognitive flexibility
- Persistence/motivation
- Social sensitivity*
- Arousal

2) Early indicators of future success

- Evident as early as 3 months

Lazarowski et al. (2019) *Animal Behaviour*

1) Relationships between cognitive performance, behavioral evaluations, and outcome

- Problem-solving speed
- Accuracy success
- Attention
- Cognitive flexibility
- Persistence/motivation
- Social sensitivity*
- Arousal

2) Early indicators of future success

- Evident as early as 3 months

Takeaways

Cognitive domains underlie important detection dog characteristics

- More objective and reliable
- Validate existing measures
 - Complementary

The role of arousal in problem solving and performance

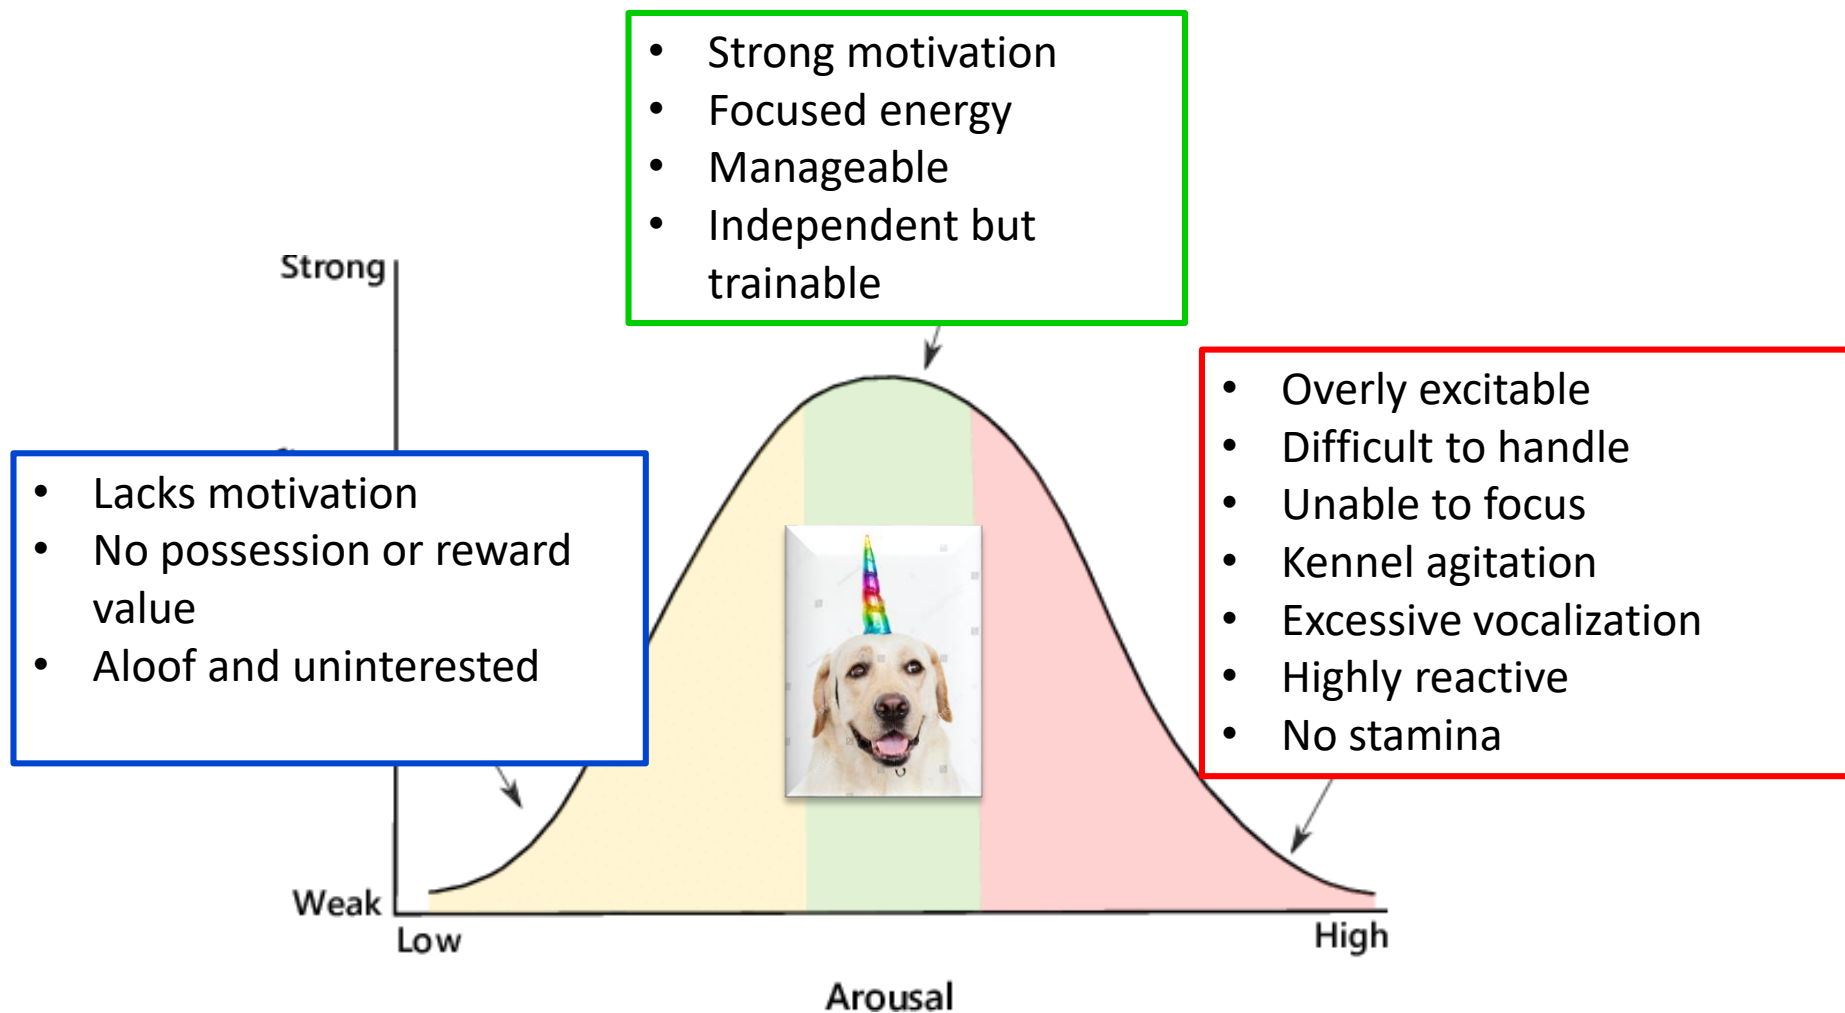

Anim Cogn (2015) 18:1317–1329
DOI 10.1007/s10071-015-0901-1

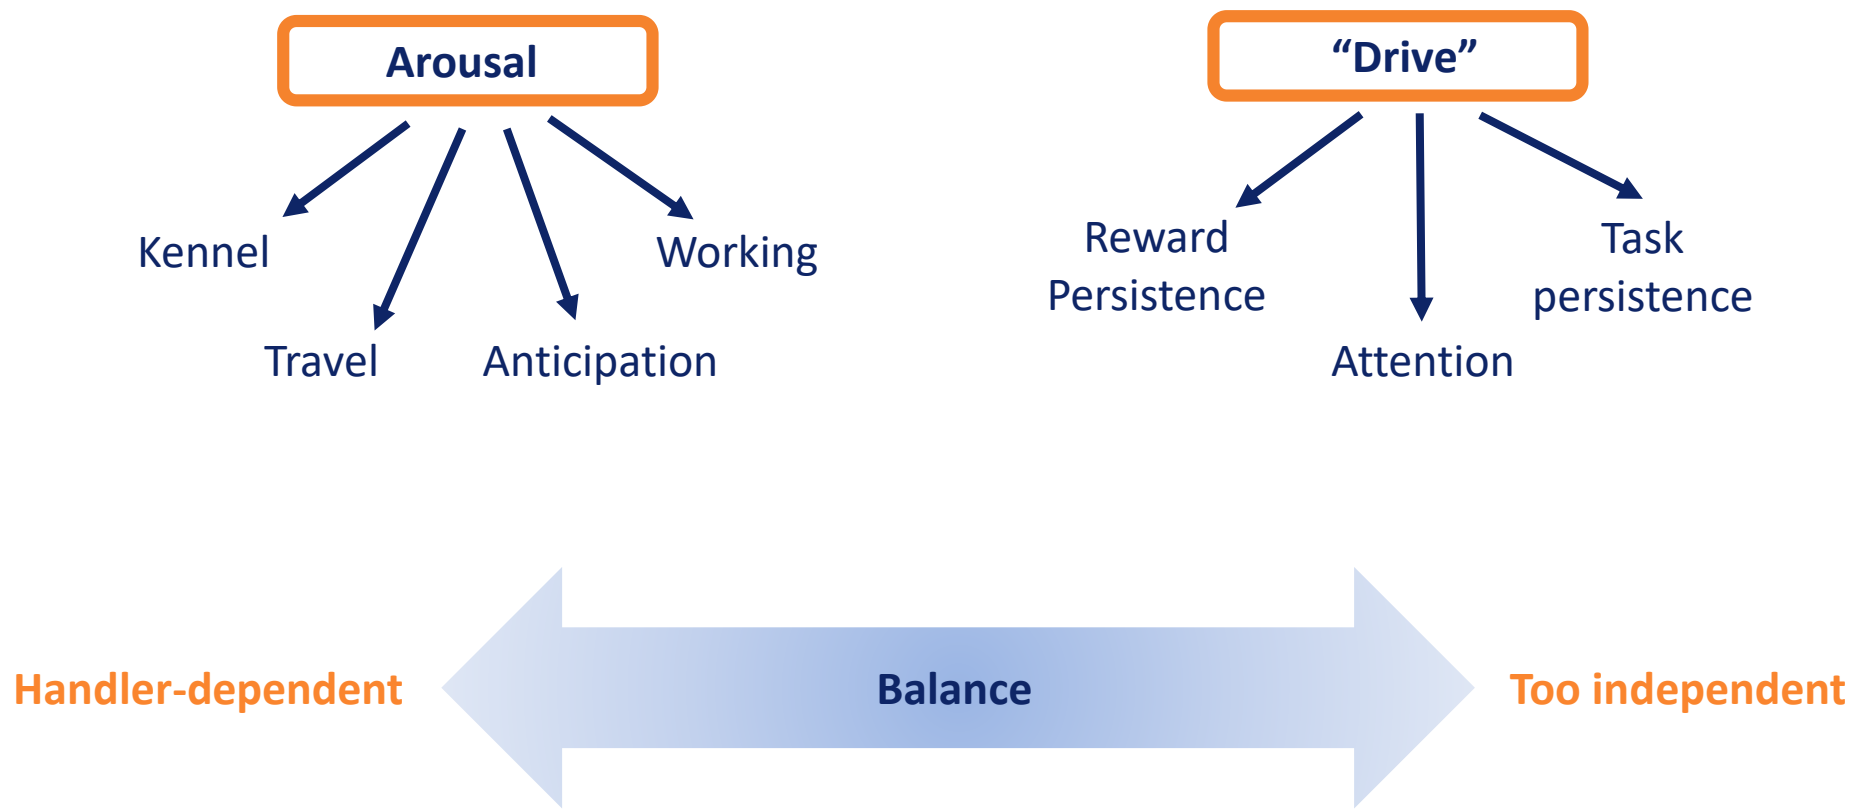

ORIGINAL PAPER

Increasing arousal enhances inhibitory control in calm but not excitable dogs

Emily E. Bray¹ · Evan L. MacLean^{2,4} · Brian A. Hare^{2,3}

Behavior Evaluations, 2.0

Behavior Evaluations, 2.0

- Adoption of ***The Behavior Checklist*** (Dr. James Serpell, U Penn) for environmental soundness measures
 - Standardized and validated
 - Can be used for genetic analysis with Estimated Breeding Values (EBVs)

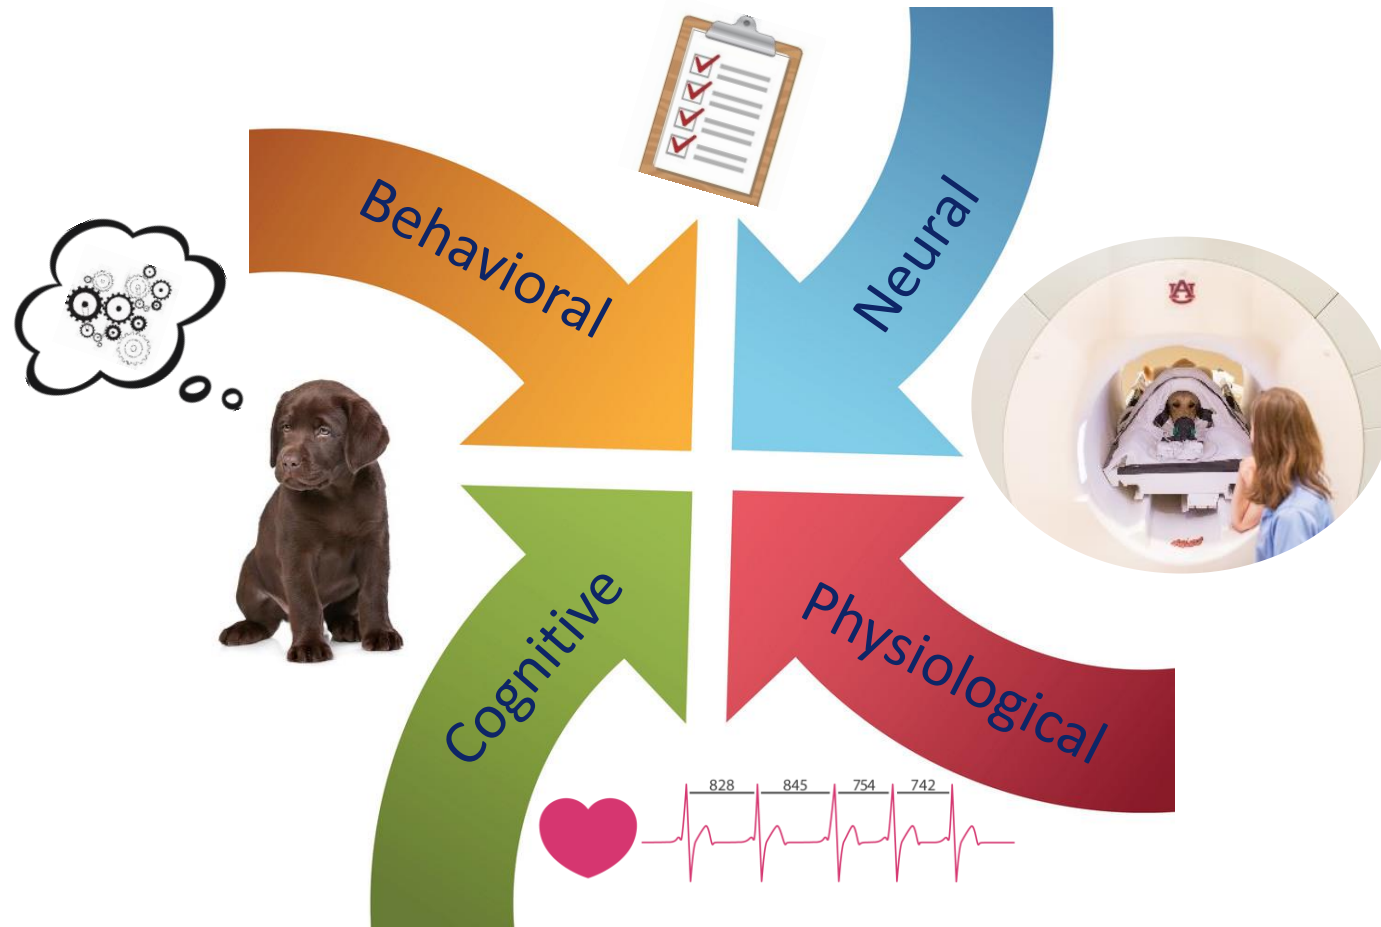

– 1 - Behavior Checklist (BCL) Scoring System

– BCL General Overview

- BCL Form Downloads
- Definitions (Download Page ~ Alt. Languages)
- > 1 - Anxious in Unfamiliar Situations
- > 2 - Fear of Noises
- > 3 - Fear of Novel Objects
- > 4 - Fear of Underfootings
- > 5 - Fear of Dogs
- > 6 - Fear of Stairs
- > 7 - Fear of Traffic
- > 8 - Separation Anxiety
- > 9 - Hyper-Attachment
- > 10 - Fear of Strangers
- > 11 - Body Handling Concern
- > 12 - Retreats when Reached for
- > 13 - Harness Sensitivity

Validation with other measures

The role of Early Life Stress (ELS)

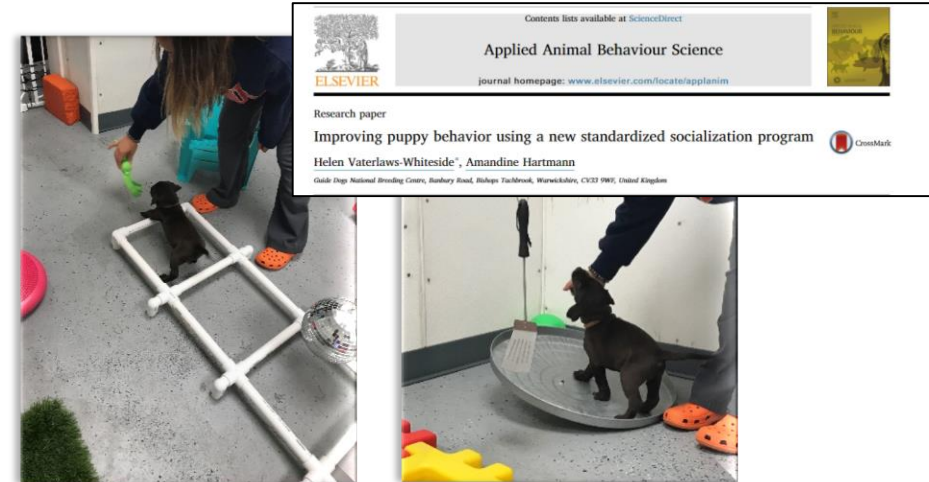

- Chronic or severe ELS can be traumatic
- Mild-moderate ELS:
 - Promotes resilience
 - Enhances problem-solving abilities
 - Self-regulation of arousal
 - “Stress inoculation”

Enhanced early socialization

- Introduction of “small challenges”:
 - Brief separations
 - Individual enhanced socialization
 - Multi-sensory stimulation

- Maternal interactions
 - Population specificity?

- Link between high performance-reactivity?
 - Biological underpinnings of sensitivity to rewards/aversives
- Influence of genetics and behavior
 - Maternal influences and epigenetics
 - Gut/brain/behavior axis

Cognitive parameters of scent detection

- Learning capacity
- Memory duration and capacity
- Limits of detection
 - Threshold, generalization
